## SUMMARY

Computer Science Engineering student with hands-on experience in frontend development, machine learning, and NLP projects. Strong foundation in Python, Java, JavaScript, React, Data Structures & Algorithms, and problem solving. Currently developing skills in Generative AI, Large Language Models, and AI-based application development through structured learning and hands-on practice. Interested in building software solutions that combine modern web technologies with AI.

## EDUCATION

|                                                                                    |             |
|------------------------------------------------------------------------------------|-------------|
| <b>ABES Institute of Technology</b><br><i>B.Tech, Computer Science Engineering</i> | 2023 – 2027 |
| <b>Anil Saraswati Vidya Mandir</b><br><i>Intermediate</i>                          | 2022 – 2023 |

## TECHNICAL SKILLS

|                          |                                                                            |
|--------------------------|----------------------------------------------------------------------------|
| <b>Languages:</b>        | Python, Java, JavaScript                                                   |
| <b>Web Development:</b>  | HTML5, CSS3, React                                                         |
| <b>Machine Learning:</b> | Data Preprocessing, Feature Selection, Model Training, Model Evaluation    |
| <b>AI / NLP:</b>         | Natural Language Processing, Text Preprocessing, Feature Extraction        |
| <b>Generative AI:</b>    | Generative AI Fundamentals, Prompt Engineering, LLM Fundamentals           |
| <b>Core CS:</b>          | Data Structures & Algorithms, Object-Oriented Programming, Problem Solving |
| <b>Tools:</b>            | Git, GitHub, VS Code                                                       |

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                        |                         |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|
| <b>Indibus Software Solution</b><br><i>Frontend Developer Intern</i>                                                                                                                                                                                                                                                                                                   | June 2026 – July 2026   |
| <ul style="list-style-type: none"><li>- Contributed to the development and implementation of user-facing features for web applications.</li><li>- Developed reusable frontend components with focus on usability, responsive design, and clean UI.</li><li>- Collaborated with team members during development, testing, debugging, and feature enhancement.</li></ul> |                         |
| <b>Cybronical India</b><br><i>Frontend Developer</i>                                                                                                                                                                                                                                                                                                                   | January 2026 – May 2026 |
| <ul style="list-style-type: none"><li>- Developed and enhanced frontend interfaces for web applications using modern web technologies.</li><li>- Implemented user-facing components with focus on responsive layouts and usability.</li><li>- Participated in requirement understanding, debugging, testing, and application improvements.</li></ul>                   |                         |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                       |                                 |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------|
| <b>Smart Crop Advisory System</b>                                                                                                                                                                                                                                                                                                                                                     | Python — Machine Learning       |
| <ul style="list-style-type: none"><li>- Developed an ML-based crop recommendation system using agricultural and environmental datasets.</li><li>- Performed data preprocessing, feature selection, model training, and model evaluation.</li><li>- Built a data-driven recommendation approach to assist users in selecting suitable crops based on input conditions.</li></ul>       |                                 |
| <b>Fake News Detection System</b>                                                                                                                                                                                                                                                                                                                                                     | Python — NLP — Machine Learning |
| <ul style="list-style-type: none"><li>- Developed a machine learning-based system to classify news articles as genuine or potentially misleading.</li><li>- Applied NLP techniques including text preprocessing, feature extraction, and text classification.</li><li>- Trained and evaluated classification models to identify patterns associated with fake news content.</li></ul> |                                 |

## CERTIFICATIONS & COURSES

|                                                                                         |                                                                 |                            |
